    overflow: hidden;
    position: relative;
    box-shadow: 0 2px 4px 0 #f0f0f0;
}
</style>
```

注册路由

```
import CourseDetail from "../components/CourseDetail"

{
  name: "CourseDetail",
  path: "/detail",
  component: CourseDetail,
}
```

在页面中引入vue-video组件实现视频播放

```
# 1. 安装依赖
npm install vue-video-player --save

# 2. 在main.js中注册加载组件
require('video.js/dist/video-js.css');
require('vue-video-player/src/custom-theme.css');
import VideoPlayer from 'vue-video-player'
vue.use(VideoPlayer);
```

在课程详情页中的script标签里面加入以下代码:

```
import {videoPlayer} from 'vue-video-player';

export default {
  data () {
    return {
      playerOptions: {
        playbackRates: [0.7, 1.0, 1.5, 2.0], // 播放速度
        autoplay: false, //如果true,则自动播放
        muted: false, // 默认情况下将会消除任何音频。
        loop: false, // 循环播放
        preload: 'auto', // 建议浏览器在<video>加载元素后是否应该开始下载视频数据。auto浏览器选择最佳行为,立即开始加载视频（如果浏览器支持）
        language: 'zh-CN',
        aspectRatio: '16:9', // 将播放器置于流畅模式，并在计算播放器的动态大小时使用该值。值应该代表一个比例 - 用冒号分隔的两个数字（例如"16:9"或"4:3"）
        fluid: true, // 当true时，video.js player将拥有流体大小。换句话说，它将按比例缩放以适应其容器。
        sources: [{
          type: "video/mp4",
          src: "http://img.ksbbs.com/asset/Mon_1703/05cacb4e02f9d9e.mp4" //你的视频地址
        }],
      },
    }
  },
```

```

    poster: "../static/courses/675076.jpeg", //视频封面图
    width: document.documentElement.clientWidth,
    notSupportedMessage: '此视频暂无法播放，请稍后再试', //允许覆盖Video.js无法播放媒体源时
    显示的默认信息。
  }
}
},
components: {
  videoPlayer
},
methods: {
  onPlayerPlay(player) {
    alert("play");
  },
  onPlayerPause(player){
    alert("pause");
  },
},
computed: {
  player() {
    return this.$refs.videoPlayer.player
  }
}
}
}

```

加入播放器以后的课程详情页组件代码:

```
<template>
    <div class="detail">
        <Header></Header>
        <div class="wrap">
            <div class="course-info">
                <div class="warp-left" style="width: 690px;height: 388px;background-color:
#000;">
                    <video-player class="video-player vjs-custom-skin"
                        ref="videoPlayer"
                        :playsinline="true"
                        :options="playerOptions"
                        @play="onPlayerPlay($event)"
                        @pause="onPlayerPause($event)"
                    >
                </video-player>
            </div>
            <div class="warp-right">
                <h3 class="course-title">Python开发21天入门</h3>

```

课程播放页面

使用保利威云视频服务来对视频进行加密.

官方网址: <http://www.polyv.net/vod/>

开发文档地址: <http://dev.polyv.net/2017/video/product/v-player/api/html5player/html5-docs/>

后端获取保利威的视频播放授权token,提供接口api给前端

视图代码:

```
from rest_framework.response import Response
from luffy.utils.polyv import PolyvPlayer

from rest_framework.views import APIView
class PolyvAPIView(APIView):
    def get(self, request):
        vid = request.query_params.get("vid")
        remote_addr = request.META.get("REMOTE_ADDR")
        user_id = 1
        user_name = "test"
        polyv_video = PolyvPlayer()
        verify_data = polyv_video.get_video_token(vid, remote_addr, user_id, user_name)
        return Response(verify_data["token"])
```

根据官方文档的案例,已经有其他人开源了,针对polyv的token生成的python版本了,我们可以直接拿来使用.

在utils下创建polyv.py,编写token生成工具函数

```
from django.conf import settings
import time
import requests
import hashlib

class PolyvPlayer(object):
    userId = settings.POLYV_CONFIG['userId']
    secretkey = settings.POLYV_CONFIG['secretkey']
```

```

def tomd5(self, value):
    """取md5值"""
    return hashlib.md5(value.encode()).hexdigest()

# 获取视频数据的token
def get_video_token(self, videoId, viewerIp, viewerId=None, viewerName='',
extraParams='HTML5'):
    """
    :param videoId: 视频id
    :param viewerId: 看视频用户id
    :param viewerIp: 看视频用户ip
    :param viewerName: 看视频用户昵称
    :param extraParams: 扩展参数
    :param sign: 加密的sign
    :return: 返回点播的视频的token
    """
    ts = int(time.time() * 1000) # 时间戳
    plain = {
        "userId": self.userId,
        'videoId': videoId,
        'ts': ts,
        'viewerId': viewerId,
        'viewerIp': viewerIp,
        'viewerName': viewerName,
        'extraParams': extraParams
    }

    # 按照ASCII升序 key + value + key + value... + value 拼接
    plain_sorted = {}
    key_temp = sorted(plain)
    for key in key_temp:
        plain_sorted[key] = plain[key]
    print(plain_sorted)

    plain_string = ''
    for k, v in plain_sorted.items():
        plain_string += str(k) + str(v)
    print(plain_string)

    sign_data = self.secretkey + plain_string + self.secretkey

    # 取sign_data的md5的大写
    sign = self.tomd5(sign_data).upper()

    # 新的带有sign的字典
    plain.update({'sign': sign})

    result = requests.post(
        url='https://hls.videocc.net/service/v1/token',
        headers={"Content-type": "application/x-www-form-urlencoded"},
        data=plain
    ).json()

```

```
data = {} if isinstance(result, str) else result.get("data", {})  
  
return {"token": data}
```

客户端请求token并播放视频

在 index.html 中加载保利威视频播放器的js核心类库

```
<script src='https://player.polyv.net/script/polyvplayer.min.js'></script>
```

在组件中,直接配置保利威播放器需要的参数:

```
<template>  
  <div class="player">  
    <div id="player"></div>  
  </div>  
</template>  
  
<script>  
export default {  
  name: "Player",  
  data () {  
    return {  
  
    }  
  },  
  methods: {  
  
  },  
  mounted(){  
    let _this = this;  
    var player = polyvObject('#player').videoPlayer({  
      wrap: '#player',  
      width: 800,  
      height: 533,  
      forceH5: true,  
      vid: '3df10095cd7aa7a0f0ca6ff876a2907a_3',  
      code: 'myRandomCodeValue',  
      playsafe: function (vid, next) { // 向后端发送请求获取加密的token  
        _this.$axios.get("http://127.0.0.1:8000/courses/polyv",{  
          params:{  
            vid: vid,  
          }  
        }).then(function (data) {  
          console.log(data);  
          next(data.data.token)  
        })  
      }  
    })  
  }  
}
```

```
    }  
  });  
},  
computed: {  
}  
}  
</script>  
  
<style scoped>  
</style>
```

显示我的订单页面

注册路由

```
# routers/index.js  
import UserOrder from "../components/UserOrder"  
  
# 路由列表  
  
  {  
    name: "UserOrder",  
    path: "/my/order",  
    component: UserOrder,  
  },
```
